

EXHIBIT B

This data is from an experiment examining the ability of anti-PDGF IgG to neutralize the chemotactic activity present in the Anti-PDGF IgG purified fraction (PDGF related) of human wound fluids collected on various days (D1 = Day 1, D2 = Day 2, etc.) As seen in the column to the far right only day 1 shows significantly high activity which is neutralizable with the anti-PDGF IgG. ie sample 1 is Day 1 in the presence of non-immune IgG 157; sample 2 is the same material in the presence of anti-PDGF IgG 28. Sample 19 is a 10 ng/ml PDGF standard in the presence of non-immune IgG 167; sample 20 is the same material in the presence of anti-PDGF IgG 40. Therefore samples below with activity below 28-40 have little or no PDGF like activity.

				ABS	Activity, μ m
1	D1	IgG	31	(249)	157
2	"	α PDGF	61	124	28
3	D2	IgG	33	(125)	29
4		α PDGF	17	108	12
5	D3	IgG	10	(126)	30
6		α PDGF	89	76	-
7	D4	G	1	(86)	-
8		P	60	45	-
9	D5	G	66	(99)	3
10		P	9	48	-
11	D6	G	11	(105)	9
12		P	78	76	-
13	D7	G	35	(108)	22
14		P	21	110	14
15	D8	G	97	(123)	27
16		P	68	107	11
17	D9	G	44	(103)	7
18		P	93	93	-
19	PDGF 10ng/ml	IgG	82	265	167
20		α PDGF	88	136	40
21	5ng/ml	IgG	15	177	101
22		α PDGF	78	104	8
23		P	28	92	-
